

SHASHIKANT KIRAN NALAWADE

Backend Developer | Java | .NET | React | AWS | PostgreSQL

nshashikant919@gmail.com | +91-9356716443 | [LinkedIn](#) | [GitHub](#) | Hyderabad, India

PROFESSIONAL SUMMARY

Results-driven Backend Developer with hands-on experience building scalable, cloud-native enterprise applications using **.NET 8 Web API, PostgreSQL 14, and AWS**. Proficient in architecting secure RESTful APIs with OAuth2 authentication, Infrastructure as Code using Terraform, and CI/CD pipelines. Also builds full-stack solutions independently using Spring Boot and React. Committed to code quality, performance optimization, and enterprise security standards.

TECHNICAL SKILLS

Backend	SpringBoot, .NET 8 Web API, RESTful Services, ASP.NET Core, OOP
Frontend	React, HTML5, CSS3, JavaScript
Databases	PostgreSQL 14, MySQL
Cloud & DevOps	Docker, Kubernetes, AWS (S3, IAM, Lambda), Terraform (IaC), CI/CD Pipelines, Git, GitHub
Developer Tools	VS Code, Postman, Swagger/OpenAPI, GitHub Copilot, Claude Code, Azure Boards, Visual Studio
Soft Skills	Agile, Cross-functional Collaboration, Technical Documentation, Problem-Solving

WORK EXPERIENCE

Software Technical Apprentice

June 2025 – June 2026

S&P Global Technology Resources | Hyderabad, India

Project: Global Trade Application

.NET 8 Web API Core | PostgreSQL 14 | AWS | Terraform

- Engineered **.NET 8 Web API** endpoints for CRUD operations with robust validation, error handling, PostgreSQL 14 database consistency checks, and unit testing to ensure reliable API contracts and high test coverage.
- Developed secure **AWS S3 file upload/download APIs** using pre-signed URLs for time-limited access without exposing bucket credentials; built state-machine metadata APIs using the S3 client library and PostgreSQL persistence, reducing response time from **5 minutes to 8–40 seconds**.
- Developed scheduled **AWS Lambda** functions to invoke specific API endpoints and automate backend workflows; provisioned Lambda and related AWS infrastructure using **Terraform** for repeatable, version-controlled deployments.
- Configured **dual database connection strings** with appropriate read/write permissions to support simultaneous multi-database connectivity based on application requirements.
- Worked on **microservices-oriented API design** by decoupling domain logic into independently deployable service modules with well-defined contracts, supporting scalability and minimizing inter-service dependencies.
- Architected **OAuth2 authorization with IdP integration**, enforcing role-based access control (RBAC) and token/refresh flows across backend APIs; followed SOLID, Clean Architecture, secure coding practices, and participated in structured code reviews.
- Collaborated with Product, QA, and DevOps teams in **Agile** using Azure Boards and developed **Azure DevOps CI/CD pipelines** for automated build, test, and deployment; provisioned AWS S3 using Terraform with IAM role bindings, bucket policies, encryption, lifecycle rules, and mandatory security-group tagging.

PROJECTS

1. Dharvexa Global Trade — Freelance Frontend Developer

[dharvexa.com](#)

Tech Stack: React, Google Sheets Webhook, WhatsApp Integration, Claude Code

- Designed and developed a production-ready responsive website for an agricultural export startup using React and component-based architecture, organizing the application into reusable pages, sections, data models, and UI components.
- Implemented dynamic product routing with React Router and parameterized URLs, enabling reusable category-based product pages with data-driven rendering for fruits and vegetables.
- Built an end-to-end product enquiry workflow using reusable React modals, capturing customer/company requirements and dynamically generating product-specific WhatsApp enquiries for direct business communication.
- Integrated the contact form with Google Sheets through a configurable webhook, implementing asynchronous submission, loading states, success/error handling, form validation, and environment-based configuration using Vite environment variables.
- Developed responsive UI across desktop, tablet, and mobile using CSS Grid, Flexbox, adaptive breakpoints, animations, transitions, backdrop filters, and reduced-motion support, with reusable visual patterns across major sections.

2. Exam & Question Paper Management System — Spring Boot REST API

[GitHub](#)

Tech Stack: Java 21, Spring Boot, PostgreSQL

- Built a REST API with **Spring Boot, Java 21, Spring Data JPA, and PostgreSQL** for creating, fetching, updating, and deleting question papers and their questions, following a layered Controller–Service–Repository architecture.
- Modeled a **One-to-Many JPA relationship** between question papers and questions with cascading persistence and orphan removal, enabling child questions to be automatically saved and deleted with their parent paper.
- Implemented user signup/login with custom exception handling through a centralized **@RestControllerAdvice** exception handler, returning appropriate HTTP status codes.
- Used dedicated **DTO/Response classes** to shape API output and prevent circular-reference serialization issues in bidirectional JPA entities.

3. AI Habit Tracker — AI-Powered Habit Tracking Platform

[GitHub](#)

Tech Stack: React, Spring Boot, PostgreSQL

- Built a responsive **React + Vite** frontend with reusable components for habit creation, dashboards, progress tracking, charts, heatmaps, streaks, and productivity insights.
- Developed **Spring Boot REST APIs** with Spring Data JPA and PostgreSQL for authentication, habit CRUD, completion tracking, streaks, statistics, and user-specific data management.
- Implemented **JWT authentication, BCrypt password hashing, protected routes, Axios interceptors, CORS, centralized exception handling, and authorization checks**.
- Designed a normalized **PostgreSQL schema** with UUIDs, foreign keys, constraints, indexes, and cascading deletes; integrated AI-powered habit suggestions, weekly reports, recovery plans, motivation, and conversational analysis.

4. AI Resume Analyzer — AI-Powered Resume Evaluation System

[GitHub](#)

Tech Stack: React, Spring Boot, PostgreSQL

- Built a full-stack **AI-powered resume evaluation system** using React, Java Spring Boot, and PostgreSQL, enabling users to upload resumes, review ATS scores, and receive structured improvement feedback.
- Designed and implemented **backend CRUD APIs** for resume metadata, file storage, and AI-generated feedback, with PostgreSQL persistence and file handling for PDF/preview assets.
- Integrated the **resume analysis workflow** with AI-based scoring and feedback generation, combining the front-end upload flow with backend-managed storage and retrieval of processed results.
- Architected a distributed project structure with separate **frontend and backend modules**, including environment-based configuration, CORS setup, and test-ready Spring Boot setup for scalable deployment.

5. Mechichs — Vehicle Service & Rental Platform

[GitHub](#)

Tech Stack: HTML5, CSS3, JavaScript, Responsive Web Design

- Developed a responsive **vehicle service and rental platform** connecting customers with local mechanics, garages, vehicle repair services, and rental options.
- Implemented interactive sections for **vehicle repair services, garage listings, vehicle rentals, pricing, and service information** using responsive web layouts.
- Implemented **online appointment and vehicle-rental booking workflows** through integrated booking forms, enabling customers to submit service and rental requests.
- Designed a mobile-friendly interface with **responsive navigation, card-based layouts, vehicle galleries, and optimized sections** for desktop and mobile users.

EDUCATION

Bachelor of Technology – Computer Science and Engineering

Lovely Professional University, Punjab, India

Aug 2021 – Aug 2025

CGPA: 7.8

Intermediate (Class XII)

Rashtriya Ucha Madhyamik Vidyalaya, Aurangabad, Maharashtra

Apr 2020 – Mar 2021

84.50%

Matriculation (Class X)

Gautam Public School, Kopergaon, Maharashtra

Apr 2018 – Mar 2019

84.20%
